Subject: RE: Request for FPM data files
Date: 04/22/2010 09:35 AM

Chip,

I think he is citing 2008 submittals of the raw data. There may have been some files provided to Jay showing significant difference for the LRM. The files we are requesting are specific input files to the FPM and must be created by the user before the output runs are completed. The files requested are FPM files named "chemistry", "input data", "ANOVA", and "biohitnohit" are specific to the FPM program. He is correct in that we have the output files, but we need the complete list of input FPM files (not just the ANOVA spreadsheets) for each endpoint to review their rational for the chemical list and set up of the models. Simply providing the ANOVA files (a part of the input file list) will not be enough. Re-creating the FPM as they have run it using the raw data would be too much work for us to complete.

Please feel free to call to clarify-

Jennifer

Subject: Fw: Request for FPM data files

All, Mike P & Jennfier

Here is the response from John Toll following up on our request for data files for the Floating Point Model. John told me they think most of the info has already been provided (summary below). It's possible some of info may have just gone directly to Jay Field (is this data available to others?). They will be sending two Excel workbooks after they get approval from the LWG on the 28th.

Chip

Hi Chip. Per our phone conversation earlier this afternoon, I'm providing information about the status of the LWG's response to your request for all data files related to the FPM including chemistry, input data, ANOVA, and biohitnohit files for each endpoint.

As I mentioned on the phone almost all of the information you're requesting has already been provided. In response you asked that we e-mail you 1) a summary of what's been provided and when and 2) the schedule for providing any outstanding files. This e-mail fulfills those requests.

The following table contains the information about what's previously

been provided:

Date	Data Files	Comment
July-2008 provided to Jay Field for his	All BERA sediment chemistry data associated with the Portland Harbor Sediment Toxicity tests, receipt acknowledged 7-22-2008	The data were LRM work
9-9-2008 provided to Jay Field for his	Excel file with bioassay data including significant difference calculation.	The data were LRM work
9-22-2009 attachments	1 Excel file with study area chemistry data	The BERA including
11-13-2009 Reanalysis Memo"	none	Memo "Benthic
11-18/19-2009 Information for Benthic addressing EPA's requests with 9 tasks	26 Excel files with FPM runs and individual endpoints using BERA hit criteria; 2 files with PFM runs and pooled endpoints using the BERA hit criteria; 6 Excel files with FPM runs and reduced chemical lists; 1 Excel file with general documentation of the FPM work; 1 Excel file with LRM results using the BERA hit criteria; 1 Excel file with generic SQG evaluation.	Memo "Supporting Risk Evaluation" for data associated
1-15-2010	16 Excel files with FPM runs and individual and pooled endpoints using EPA 2009 hit criteria; 15 Excel files with FPM runs and individual and pooled endpoints using LPL hit criteria	None
2-4-2010 SQGs Based on Endpoints"	none	Memo "Site-Specific Individual Bioassay

The only files that weren't previously provided (or requested) were two Excel workbooks that we used to do ANOVAs. We're shooting for a 4/28 Exec approval to submit the two ANOVA workbooks.

Please feel free to contact me if you have any other questions or concerns about the LWG's fulfillment of this request.

John

Subject: Request for files

Jim

Sending a quick message on the way back from Seattle. As I mentioned during our call the other day, as part of our continuing review of the benthic toxicity evaluation, EPA requests that the LWG provide all data files related to the FPM. This includes chemistry, input data, ANOVA, and biohit/nohit files for each endpoint.

We appreciate your assistance with this request. Please let us know if you have any questions.

Chip Humphrey
EPA
